

Title: DRSing all outstanding shares is not a pipe dream. I estimate how long it would take to register all shares

****NOTE: THESE NUMBERS ARE ABOUT AS CONSERVATIVE AS YOU CAN GET****

Here's my napkin math on how long it will take to DRS every outstanding GME share.

* 76.49 million shares outstanding

* 9 million shares DRS'd by Ryan Cohen

* so about 67.5 million shares remaining to be DRS'd, assuming no other individual or institutional investor DRS's

Assuming 500,000 apes starting buying and registering shares today starting at 0 GME shares:

* At ****50 shares/ape/year****, that's ****25 million shares**** in a year, or ****2.7 years****

* At ****75 shares/ape/year****, that's ****37.5 million shares**** in a year, or ****1.8 years****

* At ****100 shares/ape/year****, that's ****50 million shares**** in a year, or ****1.35 years****

* At ****135 shares/ape/year**, all shares will be registered within 1 year**

Note: These are estimates averaging all apes from X holders to whales.

This makes me extremely optimistic that MOASS can be forced in a short period of time solely with the people on reddit. Even if you had to start over from 0 GME shares and with no external catalyst, it would potentially only take a year or two to rebuy all outstanding shares.

When you take into account the bazillion shares that apes have already bought, only part of which has been DRS'd so far, registering every share is totally within reach, even if it takes a little extra time. ****Many of you have already been buying and hodling for almost a year now****. I wonder how close we already are.

Those are some pretty good odds for life changing money.

Feel free to repost this to the other GME subs. This is a throwaway account so I can't do it myself.

****ANTI-FUD EDIT:**** This is about as conservative as you can get starting from 0 and DCAing over a year. If you account for the rapid rate of existing shares being registered, it clearly won't take the full time I'm estimating.

You can refer to the estimates done by other users calculating the rate of DRSing by redditors for estimates on current progress. Go check out stopfuckingwithme's "CS MOASS-a-Meter" posts
