I was checking ortex for GME, which we know is dubious at best but it does provide up to date data, which fintel etc are way behind. Fintel are reporting DTC of around 3.6

For weeks, the days to cover has been creeping up and its at an ATH for at least the last 6-10 months now. When i tried to check the Jan '21 data, ortex kicked me out and wouldnt let me back in without paying because I was using the free version.

Anyway, in simple terms, 10 is regarded as a very high DTC but 5.3 is nothing to be frowned upon.

With DTC going up so much these last few weeks and months, we can see this correlates with the reported SI also increasing.

Simply put, the higher the DTC goes, the stronger the indicator of a potential squeeze.
