Hello all again....

So as the title says...

Based on STRAIGHT VOLUME ONLY, today is the 5th LOWEST volume day in the last 5 years.

If you look at today's volume as a percentage of total shares outstanding (V % TSO), today is the 30th lowest percentage in the last 5 years.

Just so the significance of this is appreciated, in the list of the lowest 100 V % TSO from the last 5 years, fully 1/3 of them are now from 2021 alone **AND EVERY SINGLE ONE OF THESE IS FROM AFTER 7/1/2021**

Liquidity is no longer present! DRS is making a difference.
