Not a sh-ill, been here since Feb 2021. Saw the waves in the quarterly pattern the second iteration, and should have definitely sold half and then bought back in when they dropped the price, over and over again...

But, hindsight is 20/20

So, now... what do you do with 4X the number of shares in GameStop?

Let's pretend you had 1000 shares pre-split and you were going to sell a \$10K? You'd have \$10M doing that. However, you now have 4000 shares... and could sell 1000 at \$10K and still have \$10M PLUS your 3000 remaining shares.

What if the price keeps going to \$100,000? You've lost \$90M, right? You'd only have \$310M total instead of \$400M. If those two numbers are different to you, congrats... you are now one of the people you hate.

If they drove the price to \$10K, they might also drop it down to \$1K to induce panic selling. Now, if I had \$10M in profits already locked up, I might just buy my 1000 shares back at \$1000 (\$1M) and I now have \$9M in the bank, and all 4000 of my shares still in hand? If they have to deal with buying pressure from retail during the squizz, the price should go up faster and it will be harder for them to drop it since they can only short it to do that, which means they're no closer to be out of short positions than when it started...

Remember, they need ALL of your shares...not just some. I do not see any issues with selling some, and I personally believe that they KEPT US FROM DOING THIS for a good year now. If I had done this when I first saw it, and timed it even close to the pattern I saw... I would have made \$1M last year.
