

Title: Most of you know that GME tends to move congruent downwards with SPY...but at an exponential rate. I attribute it to shorts liquidating to continue their attacks instead of closing. But now look...(swipe) SPY and GME have diverged and whale(s) has entered on our side! Bullish AF! Let's go! ■■■■

Check Out What Whales Are Doing With GME

01/21/22 1:06 PM

January 21, 2022 01:06 PM ET (BZ Newswire) – Options

Someone with a lot of money to spend has taken a bullish stance on **GameStop** (NYSE:GME).

And retail traders should know.

We noticed this today when the big position showed up on publicly available options history that we track here at Benzinga.

Whether this is an institution or just a wealthy individual, we don't know. But when something this big happens with GME, it often means somebody knows something is about to happen.

So how do we know what this whale just did?

Today, Benzinga's options scanner spotted 28 uncommon options trades for GameStop.

This isn't normal.

The overall sentiment of these big-money traders is split between 57% bullish and 42%, bearish.

Out of all of the special options we uncovered, 19 are puts, for a total amount of \$1,060,007, and 9 are calls, for a total amount of \$488,897.

What's The Price Target?
