

Title: 4 Screen Recordings: The massive volume spike @ 1:39-1:40 PM ET today (June 17) is only visible on desktop, but clearly missing on mobile (both devices w/ active internet connection) — Could be evidence of 2 diverging data feeds...if so, wut doin' data feeders?

This is on the desktop and mobile on Apple's Stocks apps- I tried to synch the exact times up- they're within a few tenths of a second.

**\*\*4 screen recordings below\*\***

- \* 2 taken at 3:54-3:55 PM ET, 2 taken at 5:10 PM ET
- \* On desktop, you can clearly see the volume spike from 1:39-1:40 PM ET
- \* On mobile, that same volume spike is completely missing
- \* The volume totals are also different:
- \* At 3:54-3:55 PM ET:
- \* Mobile was higher by ~52k
- \* As of 5:10 PM ET
- \* The volume totals now differ by only ~10k
- \* The volume spike is still only visible on desktop

**\*\*Yes, I know Yahoo Finance data is shit, but this could be evidence of 2 diverging data feeds:\*\***

- \* It may have nothing to do w/ Yahoo Finance, and instead be something further upstream at NYSE
- \* I'm wondering why there would be any difference that lasts over an hour on the same company's stocks apps- to me, that suggests this isn't an Apple Stocks problem either
