#The rate of new CS accounts over time :

34,000 in October

15,000 in November

17,000 in December

10,000 in January

8000 in February

10,000 in March

****10,000+ already in April !!****

Awesome job!!

According to the trimmed average on computershared.net by u/jonpro03, which was recently proven to be highly accurate, the average shares per CS account is now 80.57 and the new CS account high score is 148,900. This brings our DRS total to 12M shares with 10 days remaining in GameStop's 1Q. That's 35% of the free float or 19% of the whole 63M float! (outstanding minus insiders).

My biggest worry about DRS progress is that once all apes who are going to DRS do so, the CS account high score will completely stop growing. This day is just around the corner! Let's face it, with the stock dividend news, If any ape is not DRSing now, they're not going to. Then, our DRS total will only increase by the amount of shares existing DRS apes are adding. Then, instead of our numbers growing by ~1.23M per month (based on Oct. 30 - Jan. 29 GameStop earnings release dates), they will only grow by, optimistically, 450,000 per month (if all of the 150,000 existing CS accounts add 3 shares per month). At this reduced rate, it would take 10 years to lock the 63M float!

#This is why these 3 things are CRITICAL!! :

1. ****We need to educate the masses outside of Reddit what DRS is and why they should do it.**** This is exactly why u/derhyperschlaue and I and 30+ wonderful volunteers started ****drsgme.org****!
[My Twitter script](<https://twitter.com/Millertime1216a/status/1515480649146241031?s=20&t=gTGyrdRiFRIYQFQZ-m2nOw>)

2. Apes with money tied up in ****"other investments"**, consider converting those to GME and DRS**. What other investment could possibly compare to GME?!? Even IF others can sque*ze, they can't sque*ze like GME and only GME has a massive turnaround plan.

3. Apes with shares in brokers that will not DRS or transfer, such as ****Etoro and T212** : think about selling and re-buying elsewhere!!** They don't have the shares anyway, so selling and re-buying hurts nothing! Please don't trust your millions to a broker that won't DRS! Seriously, go read their TOS. Also, see links at the bottom of this post.

All too often I see posts using ~33M as the float, but I'm convinced that is wishful thinking. Existing shares of ~75M minus insider shares of ~12M = 63M shares that probably need to be DRS'd. Do you really think hedgies can't use NON-DRS shares (institutional, mutual fund, and ETF) to continue their manipulation?!? So, even IF there are actually 250,000 apes on Reddit (or others that somehow know about DRS), and even IF they all DRS, the average number of shares per ape would need to be 252 to lock the 63M. An

extra \$18,000 per ape at 180/share!! Obviously this will take a much longer time to accomplish. Even IF we continue to DRS 1.23M shares every month from Jan. 29, 2021 forward, it would still take us until September 2024 to DRS the 63M shares

****Get to WORK and spread the word about drsgme.org to the masses outside of Reddit !!!and DRS your max!**** If you haven't DRS'd, why not?!?! I don't trust any broker now. I certainly won't trust them not to screw us over with the upcoming dividend stock split or during MOA*S and/or when they're facing insolvency. Read your broker's TOS. Would you put \$50M in a bank account in your ex's name? Then why would you leave your GME in the DTCC's name?! I don't say this to scare anyone, I say this because I love you and want you to get your tendies.

#Changing the world is what's at stake!!

#LOCK THE FLOAT!!!

#TLDR: DRS your max! Spread the word about drsgme.org
