Hello Apes.

<https://imgur.com/a/WZRxCkb>

Here are today's GME Option Chain Heat Maps for trading that occurred on 1/28/2022. There are now three images:

- 1) The Calls Heat Map
- 2) The Puts Heat Map
- 3) A Summary Heat Map

The summary heat map looks at each available strike price currently available across all the expiry dates and provides a cumulative number for the OI,  $\Delta$  OI, and the Volume. The left side of the chart tracks calls and the right side of the chart tracks puts.

I realize the current heat map charts for the calls and puts are not the easiest to interpret the data from quickly. This is a work in progress and will continue to devolve (you know in the realm of devolving from human to ape).

Now that I have my code to automatically choose the correct colors in the spreadsheet program, I have some more flexibility in making a layout that better represents the data. I hope to start using version 2.0 of the heat maps soon.

I fully realize that for some apes, options are an anathema. However, there are some who are following them. Please let me know if this is of value to you. Again, open to suggestions...

Obligatory: This is not financial advice. However, this is a service of the APES FUCKERY FINDING SERVICE.
