Dear fellow apes,

despite all difficulty to generate reliable calculations to evaluate our historic and current impact and position in this manipulated game, I thought it would be a good idea to create a survey, we can use to estimate the average apes' holding of GME stock.

Forgive me for not including current option plays in the poll. I know many of us are crafting silver bullets on the DRS side of things, while some others have moved on to fight on the call-option-chain-side to build the gamma ramp that will ultimately serve as the nail on the coffin.

To me, pressure seems to be at an all time high and I'm as always excited for the next and coming weeks, as I feel Hedgies are currently in a headlock, not able to short the price lower than 95 and above 120 before massive escalation occurs. Be it the dip before the rip. HODL.

Thanks for your responses and criticism if you believe this survey to be stupid or unhelpful. Constructive feedback or reliable information on the matter is as always welcome.

Please check the box, you're closest to. The numbers below represent shares owned, not the \$ you've invested.
