Jan 2021 GME Ape here. For apes who have been in the game since Jan 2021, does this feels like Feb situation where GME is under short attacks and price went down to \$40 for a few weeks?

Back then, hedgies couldn't suppress the price anymore and we see substantial upwards price action.

If I did not sell at \$40, why should I sell at \$120 especially after gaining some wrinkles throughout the past 12 months. In fact on the contrary, I'm hoping that price can drop below \$100 before my next paycheck so I get more shares ■■

I just feel that all the recent drama: Fake NFT news, AH price spike and dump, citadel needing cash injection etc.. Seems like the Feb 2021 play to get paper hands to sell the shares and miss out on the next cycle..

Anyone else feels the same way as I do??
