market price. These and other factors may cause the price of our Class A Common Stock to fluctuate substantially, which may result in a decrease in the price of our Class A Common Stock and may otherwise negatively affect the liquidity of our Class A Common Stock.

A "short squeeze" due to a sudden increase in demand for shares of our Class A Common Stock that largely exceeds supply has led to, and may continue to lead to, extreme price volatility in shares of our Class A Common Stock.

Investors may purchase shares of our Class A Common Stock to hedge existing exposure or to speculate on the price of our Class A Common Stock. Speculation on the price of our Class A Common Stock may involve long and short exposures. To the extent aggregate short exposure exceeds the number of shares of our Class A Common Stock available for purchase on the open market, investors with short exposure may have to pay a premium to repurchase shares of our Class A Common Stock for delivery to lenders of our Class A Common Stock. Those repurchases may in turn, dramatically increase the price of shares of our Class A Common Stock until additional shares of our Class A Common Stock are available for trading or borrowing. This is often referred to as a "short squeeze."

A large proportion of our Class A Common Stock has been and may continue to be traded by short sellers which may increase the likelihood that our Class A Common Stock will be the target of a short squeeze. A short squeeze has previously led and could continue to lead to volatile price movements in shares of our Class A Common Stock that are unrelated or disproportionate to our operating performance or prospects and, once investors purchase the shares of our Class A Common Stock necessary to cover their short positions, the price of our Class A Common Stock may rapidly decline. Stockholders that purchase shares of our Class A Common Stock during a short squeeze may lose a significant portion of their investment.
