This video:

<https://www.youtube.com/watch?v=OChaTm0To1U>(<https://www.youtube.com/watch?v=OChaTm0To1U>)

Something has been bothering me about all this since I was a smooth brained ape back in January lol-ing in on a stock that reddit said was good with my robinhood account I only used for crypto. I've read about 17 finance books since then and hit refresh on this subreddit all day every day. I'm not wrinkly yet but not as dumb as I once was. Here we go...

Important points in this video:

\-Money makers don't always hedge the options they sell when option volume is high.

\-Shitadel didn't hedge during the GME run up, and when it started to the price went nuts.

\-Brokers turned off the buy button to protect the market maker's liquidity... eg they cheated.

\-While the buy button was off, they let shorts buy shares to cover.

1. The general consensus here after the SEC report is that the big sneeze was caused by fomo. The guy from the video says that it was caused by Shitadel starting the process of hedging all of those fomo options. If the smart seeming KFC guy in the video is right, then we need to adjust our thinking.
2. Woah nelly this could be big.

If buying was turned off, but short hedge funds were allowed to cover during those couple of days, that could be interesting. Jan 29 had about 50m in volume. Feb 1 had about 37m. Feb 2 had 78m. 150m in volume on 3 days that had restricted retail trading on a stock that only had ~65m float... if I remember right, there was some institutional selling during this time but not enough to cover 150m shares, and very very little retail involvement in that volume.

HERE IS WHAT HAS BEEN BOTHERING ME SINCE DAY 1: Like the KFC guy said, market makers sell stuff they don't have all the time to provide liquidity. Its literally their job. During the time the buy button was off, si% fell off a cliff. Lets say for the sake of argument that the 150m in buying those days was done by short hedge funds. What are the ramifications?

\-current SI is accurate.

\-hedgies did cover and aren't as fuk as we thought.

\-Shitadel printed a fuckload of naked moon tickets to provide liquidity to those shorts.

...So now shitadel is sitting on a MEGA LOAD FUCKTON of short positions from fronting shares they didn't own, and a mega fuck load of unhedged options bullshit from the Jan sneeze. They can't sustain it forever, but they can hold out a long ass time. That would mean a fuckload of "Securities sold, not yet purchased" would be showing up on their books.

Ruh oh, what's this?!

<https://preview.redd.it/qmfxld6n0a81.png?width=722&format;=png&auto;=webp&s;=76a87445b7a144d5d90fa85a6530989640661490>

Now, what if Shitadel was trying to slowly, steadily close that mega fuckload of naked positions they took. What might they do? Maybe try to cover a little at a time until they realize they're doing it too regularly and its causing more options fomo... then stop doing it? If that was true, you might see something like... this..

<https://preview.redd.it/jlfzo878n0a81.png?width=471&format;=png&auto;=webp&s;=9d390f382b54162ffe711cf90482bc6c88f6bafd>

They want to keep a lid on GME so they can keep closing out their short position, make sure no new fomo happens, and slowly but gracefully exit.

If you think about it, its such a cleaner explanation. It explains the weird behavior of the stock, the run ups, the missing si%, the fud, and Ken aging about 20 years in the last year.

If this is true, we need a wrinkle brain to confirm it bad, because DRS might be a race against Shitadel squiggling out of this one and the badguys winning.
