For instance, how does the European ticker of GME (G2SC) work? Does a US-GME stock get taken from the market for every European stock that is created? Does every European share have a real (!) equivalent in the American market? If so, how would all that work with Germany owning roundabout the entire float once?

G2S2 =

\* Market:[Germany](<https://www.investing.com/markets/germany>)

\* ISIN:US36467W1099

\* WKN:A0HGDX

GME =

\* Market:[United States](<https://www.investing.com/markets/united-states>)

\* ISIN:US36467W1099

\* CUSIP:36467W109
