Sup crayon munchers? My Mom just let me out of the basement for my daily hour of screen time, so let's get to it.

****TLDR:****

You have 34 days to DRS your shit

****DISCLAIMER****: This bit of tin-foil about tweet timing could mean nothing and wouldn't change my thesis whatsoever, just want to give insight on how this smooth as a wet seal brain put this connection together.

I think we can all agree Ryan's purple heart tweet is a nod to DRS, but in true Reddit fashion, I had to give it a full 4-point inspection. The tweets are seemingly unrelated, so I focused as hard as I could to find out the time between tweets $10:11 - 9:37 = 34$. *Yay math!*

****Why is 34 important? 2 things:****

1. Ethereum's merge is scheduled to complete in 35 days

2. T+35 trade settlement

"But Jango, all those cycles never work out!" Not so fast young Ape. I'm gonna take you back 84 years ago when you were still pissing the bed & suckling from your momma's teet.

On 12/8/2020 GME entered the Reg-SHO threshold list. 35 days later the stock opened at \$20.44 and rocketed up 90% to a high of \$38.6 on 144,501,700 volume (2x shares outstanding)

****Ok hold on, what's Reg-SHO?****

It's what keeps Hedgies up at night. Per Investopedia:

<https://www.investopedia.com/terms/r/regsho.asp>

Now here's the requirements on closing shorts. Our favorite Pomeranian u/Criand colored this for us many moons ago.

<https://preview.redd.it/fsxlnzt0g5h91.png?width=975&format=png&auto=webp&s=3c8ed58cbda4593062727e3c4854ed666982a6d8>

There's a ton of good research on Reg-SHO and it's short comings by Dr. Trimbath, and I agree that like most of our financial system it is shit. It has proposed settlement dates of T+3, T+4, T+6, T+13, etc.. but AFAIK if the shorts ask "pwetty pweez can I haz some more time?" they are able to extend out to T+35. Longer it takes, the more I buy. Which leads us to the ticking time bomb, & RC's ace in the hole: BBY.

****BBY IS ABOUT TO HIT REG-SHO****

As we all know by now, at least some of the short position against GME is in a basket of brick & mortar co's, including BBBY, leading RC to buy-in and profit off of SQZ without selling his GME shares. Using the most current fails data for July (Someone buy the SEC some fucking coffee so we can get this faster), I calculated an average fail rate of 4.03% daily volume.

<https://preview.redd.it/3okrchf2g5h91.png?width=791&format;=png&auto;=webp&s;=6e06b3e2379071a52d949927ae04cabd3904b1e5>

In the past 5 days, BBBY has traded entire shares outstanding almost 5X. If we apply a 4% fail rate to daily volume, this easily clears the benchmark of .5% fails of total shares to qualify for Reg-SHO.

[\\\"Sir those are as good as stock, they're IOU's!\\\"](<https://preview.redd.it/xl3ynz34g5h91.png?width=866&format;=png&auto;=webp&s;=ed24b8b7f4599007d8306ff96a1f38e1a8fc2acd>)

If BBBY follows same path as GME, we should see a huge move up on September 15th. What happens after is uncharted territory, cuz ya know they turned the buy button off when this happened to GME..

But Jango, this is a GME sub, wut have to do with us?

Have you been living under a rock? OUR CHAIRMAN bought 9.8% of the company @ \$15.34/ share, has a metric shit ton of calls, and he just kicked the CEO to the curb and brought on a whole new Board of Directors. Over 100% of the float is shorted (sound familiar?) Oh and the media is giving it the "Forget GameStop" treatment too:

[How much coke you think this guy consumes on a daily basis?](<https://preview.redd.it/wr zg1b97g5h91.png?width=972&format;=png&auto;=webp&s;=79206c85cce8c1cce190ced89310d737b44e9ad9>)

[Seriously, how much coke?](<https://preview.redd.it/8ujmh2x9g5h91.png?width=953&format;=png&auto;=webp&s;=871cdbc45c8794cf74450e4459e7a520b14ae151>)

In summary, I think BBBY is a huge part of RC's master plan but this alone isn't enough to trigger THE SQZ. Think of BBBY short settlement as Gohan lending his strength to Goku (GME) to drop the Spirit Bomb on Wall St cucks. Now what else did I say is happening September 15th?

****THE ETHEREUM MERGE****

IMO this is what GameStop has been waiting on before launching the full NFT Marketplace that will be home to ALL Intellectual Property. Ethereum is transitioning from Proof of Work (crazy energy cost like CIA buttcoin) to Proof of Stake. In the smoothest of summaries this means:

1. Cheaper to use
2. Faster
3. More Secure

4. 99.9% more environment friendly

5. Staking rewards

6. No mining-sell pressure

This is a massive transition that has been many years in the making. With everyone in the world besides us hoping GameStop will fail, it only makes sense they would wait for its blockchain to be fully functional before fully releasing their groundbreaking tech. Here's more info concerning the merge:

<https://ethereum.org/en/upgrades/merge/>

****Will this be enough to ignite the Mother of all SQZ?****

It damn well could be. If I've learned anything from this saga its:

1. Don't fuck with gamers

2. Ryan Cohen most definitely does not have a small wee wee

3. Ask what you can do for your company

I believe the full launch of the marketplace will surpass even the highest of our expectations, and it's very likely that it will be paired with something Wall St isn't expecting. Tokenized stock exchange, spin off of GMERica, take your pick of theories.. Here's one of my favorite DD's from u/sharkbaitlol about the potential [https://www.reddit.com/r/Superstonk/comments/pe37k7/the_gme_warpath/](https://www.reddit.com/r/Superstonk/comments/pe37k7/the_gme_warpath/)

****Conclusion****

I believe RC has lit the beacon and gave the final warning to DRS. If you haven't seen enough evidence of fuckery to DRS at least part of your position by now, then idk what to tell you. The music is stopping and Wall Street is about to be left holding the biggest bag of odorous excrement ever assembled in the history of capitalism.
