So I just noticed this new feature on etoro, they show you how many people are investing on something only when you share a post about opening a new position. This number on this post of 4 days ago was 92,112. I guess it means there were 92,112 people on that platform investing in my favorite stock.

something like 3 months ago, Etoro published that post (it was when the voting thing was happening), where they stated that etoro's GME investors accounted for 1,5% of the total investors. I guess it means that, of the total number of investors, 1,5% owns it on etoro.

if my interpretation is correct (crossing this 2 data given 2 months apart from a broker) there should be around (the data are from different time so there's no point to try to get an exact number) 6.1M investors.

Thanks to my master in engineering I am able to do this calculation. \[Ironic\]

This means that with an average of 9 shares each, we're above the float, and with an average of 13 we're above the outstanding shares.

EDIT: I see many comments saying that that 1.5% was about etoro's user base. But in the same exact time etoro showed that 6.38% of its users were investing in gme. Anyone who uses etoro on desktop knows that keeping your pointer on the 3 dots beside the stock line it shows this kind of data. At this time in time it's 5.72%, so anyway neither then or now it was 1.5%

EDIT#2: DeepFuckingAnnoying (approve the name) reminded me that etoro, after the voting, accounted for 709,000 shares and that 63% of eligible ones voted, so the 100% is 1.2M. If we divide that by 92,000 (number in the screenshot, in case apes forget), that means 13 shares on average.

BUT

those were only the eligible shares, meaning bought before april 1st. I don't know you but from then my number has increased. Anyway, combining the 6.100.000 investors with 13 shares each (to be in the most conservative scenario ever, I do believe it's more than that thinking that there are people holding since december when the price was much lower) it comes a little less than 80 Million shares.

I believe we own way fucking more than the fucking float

EDIT#3: I remembered that everyone does it. No financial advice and bananas.
