TL;DR ...get involved in Blockchain and DRS your shares. Back a few months ago, after discovering that Ryan Cohen was moving Gamestop to Blockchain, I had the hunch that something much bigger was moving in the background because why and how would a new Chairman of a Brick and Mortar Company be making such a leap to digital assets. on top of going on a hiring spree of employees for retail? It did not make sense to me, so I started digging and came to the conclusion that it is for survival but not because of why most apes think. It will be a sharp and a violent exit from today's market makers over to Automated Market Makers. Let me explain... During that dig, I discovered and made a post about Terra Network having Mirrored assets. At first I thought it was great, but then I read the White Paper that was published in 2019....

This is Centralized in every way. In case you cannot read through this fancy jibber-jab, this is called the "Good Olé Boy" system. Key words are "elastic monetary policy", "incentives", "managed by a Treasury". They screw you over and award their friends that benefit them. They will take all of the competitors work, give the award to someone they personally know or someone who has promised things in return hand pick what they want and then develop it to benefit the members on the Treasury. It is the same scheme and fancy language the Federal Reserve used to weasel their way into the United States. A good rule of thumb to follow is. if the platform or institution looks like 1 million dollars, it came from 1 billion dollars. Think about it when you are driving through a dried up old industrial town. What buildings are the nicest buildings? The banks.

The Central Banks printed and loaned money to companies to people with ideas and then manipulate the market to bankrupt the target company so other private institutions or Governments could swoop in and buy their patents. A good ole fashioned Bust-Out-Scheme total scam. You know, that same

scheme Jeff Bezos, Mit Romney and Ken Griffin use to destroy brick and mortar companies. Also, instead of rewarding money to people with ideas, they printed and loaned money to countries that waged war on other countries that did not have a Central Bank. I explained the Military analogy in my original DD about Gamestop and Blockchain, but I will explain it again here for the readers who have not read it. Bitcoin runs off a Proof-of-Work system. Proof of work (PoW) describes a system that requires a not insignificant but feasible amount of effort in order to deter frivolous or malicious uses of computing power, such as sending spam emails or launching denial of service attacks. The concept was later adapted to securing digital money by Hal Finney in 2004 through the idea of "reusable proof of work" using the SHA-256 hashing algorithm.

War is the globally adopted Proof-of-Work social consensus protocol that nodes (countries) use to validate the legitimate state of property and its chain of custody. Militaries project force across time (i.e., energy) in a fundamental game of probability to trigger a capitulation event. This is functionally identical to Bitcoin PoW miners projecting energy to probabilistically trigger the end of each block. The reward for militaries that succeed in probabilistically triggering capitulation, is that participating nodes (countries) will grant consensus to the military host's claim over what the legitimate state of property is. Thus, the history of warfare, and its corresponding chain of custody, is literally just a PoW backed blockchain. Ever notice how the reserve currency (i.e., the globally legitimized state of property) belongs to the country with the most powerful military? That isn't a coincidence. Society instinctively values PoW as the "fair" consensus. Socialism is the globally adopted Proof of Stake (PoS). The Terra Protocol it is more democratic communism style slavery, where miners (slaves/GPUs) need to stake (deposit) a native cryptocurrency

Luna to mine (work) Terra transactions. At every block period, the protocol elects a block producer (dictator/rich slave owner/wallet/ip address) from the set of staked (deposited) miners (slaves), which is entrusted with the work required to produce the next block by aggregating (collecting) transactions, achieving consensus among miners, and ensuring that messages (propaganda/alterd transactions) are distributed properly in a short timeframe with high fault tolerance (Gary and the SEC). The block producer (dictator/wallet) election is weighted by the size of the active miner's (slave allowed to work) Luna stake (deposit). Therefore, Luna represents mining (slave) power in the Terra network. My analogies might be a little rough, but I am sure you can see how corruption can be hidden by whoever owns the wallet and miners...either voluntarily or by force. Yes, Bitcoin uses a lot of Energy as of now, but would you rather use extra electricity or give a entity with the most money power over the transaction collection? I choose electricity because once we can stop the manipulation, we can work towards clean and free energy for all. If I can see this, other, wrinklier apes like Ryan Cohen have seen this. I will not get into too much detail on this because it has been covered by several people. If you disagree with my summery of the history of the federal reserve, watch this video from The Corbett Report.

But as you all know, the Federal Reserve has been screwing America over since the beginning of it. But it started before that. FDR said it best when he wrote a letter to Colonel Edward House... The real truth of the matter is, as you and I know, that a financial element in the larger centers has owned the Government ever since the days of Andrew Jackson.

In short, Andrew Jackson was painted as a crazy man and he was. He was crazy about this country. He was in over 100 duels and escaped an assassination attempt with a bullet in his chest wall. Mostly because he wanted to keep the central bank out of America. He kept the bank out of America and paid off the US debt. But the next generation of citizens fell for rumors about why the economy was bad when really it was currency/market manipulation, so the Central Banks started to make a comeback. Before today's Monetary Policy was implemented, there was a fight to make it Public instead of Private. Obviously Private won. Surely that is a long way off from happening, right? No! There is a battle going on behind the scenes to control this and whoever wins, public or private. The economy will crash harder and faster than anything you have seen.

Why do I think we are going to suddenly merge into a completely digital economy? Well, because the Board of Governors of the Federal Reserve told us.

Why do I think it will happen fast? Because the Board of Governors of the Federal Reserve requested it...

What is ISO20022? ISO 20022 is a multi part International Standard prepared by ISO Technical Committee TC68 Financial Services. ISO 20022 is an ISO standard for electronic data interchange between financial institutions. It describes a metadata repository containing descriptions of messages and business processes, and a maintenance process for the repository content. The standard covers financial information transferred between financial institutions that includes payment transactions, securities trading and settlement information, credit and debit card transactions and other financial information. The repository contains a huge amount of financial services metadata that has been shared and standardized across the industry. The metadata is stored in UML models with a special ISO 20022 UML Profile. Underlying all of this is the ISO 20022 metamodel - a model of the models. The UML profile is the metamodel transformed into UML. The metadata is transformed into the syntax of messages used in financial networks. The first syntax supported for messages was XML Schema.

ISO 20022 is widely used in financial services. Organizations participating in ISO 20022 include: FIX Protocol Limited (Financial Information eXchange), ISDA (FpML), ISITC, Omgeo, SWIFT and Visa. Here is a short YouTube video briefly explaining it.

The resulting models and derived messages are published in the Catalogue of messages and stored in the ISO 20022 Financial Repository available on this website.

This flexible framework allows communities of users and message development organizations to define message sets according to an internationally agreed approach using internationally agreed business semantics and, whenever desirable, to migrate to the use of a common XML or ASN.1-based syntax.

Note: The tool that is used by the Registration Authority (RA) to convert the message models into ASN.1 schemas has been built by OSS Nokalva, Inc. More information about the use of ASN.1 can be found on the OSS website at [www.oss.com/iso20022.html](<http://www.oss.com/iso20022.html>).

What are some ISO20022 coins?

• Ripple (CCC:XRP-USD) • XDC (CCC:XDC-USD) • Stellar Lumens (CCC:XLM-USD) • Iota (CCC:IOTA-USD) • Algorand (CCC:ALGO-USD)

I can sit here and describe the history and functionality of XRP, but you should go and research these coins yourself. I am here to show you the shady moves that are going on behind the scenes, so I am only going to give you ins-and-outs of the coins relative to this DD.

XRP - RIPPLE

<https://preview.redd.it/eeryusv9aix81.png?width=760&format;=png&auto;=webp&s;=5cd4271c2e5155712d65d172c1a3daf9603f696c>

Looks like Star Links Design...background and everything

David Schwartz is Chief Technology Officer at Ripple. David is one of the original architects of the XRP Ledger. Prior to joining Ripple, David Schwartz was Chief Technical Officer for WebMaster Incorporated, a Santa Clara software developer. He developed encrypted cloud storage and enterprise messaging systems for organizations like CNN and the National Security Agency (NSA). Known as "JoelKatz," he is a respected voice in the digital currency community. The fact that he has done work for CNN and the NSA raises red flags to me. As we know, the MSM is fed propaganda by the CIA via Operation Mockingbird. For those that do not know, Operation Mockingbird is a large-scale project undertaken by the CIA beginning in the 1950s in which they recruited American journalists into a propaganda network. The recruited journalists were put on a payroll by the CIA and instructed to write fake stories that promoted the views of the intelligence agency. Student cultural organizations and magazines were allegedly funded as fronts for this operation. When the public found out about it, the CIA stated they changed the program to a voluntary program...aka incentivized. As for the NSA, we all know about the MASSIVE public surveillance program that was made possible by the Patriot Act... Edward Snowden made us aware of this in 2013.

There are several big names on the board of XRP. One of them is Ben Lawskey. He was the former aide to NY Governor Andrew Cuomo before becoming the New York Superintendent of Financial Services. After years of anonymous work for Chuck Schumer and Andrew Cuomo, Lawskey was, rather suddenly, the subject of a flurry of profiles in the business press, which tried to determine exactly who he was and why he was suddenly breaking with federal regulators in Washington to launch his own action against tax evaders.

Lawskey has long been one of Cuomo's most trusted aides, and his involvement on any initiative, going back to Cuomo's first days as attorney general, was a sure sign that the office was out for money. He was instrumental in Cuomo's pursuit of student loan lenders, and later, was the point man for negotiations with Bank of America when Cuomo's office accused the bank of fraud.

Lawskey's wife, Jessica Roth, is a Professor of Law at Cardozo School of Law, where she is the co-director of the Jacob Burns Center for Ethics in the Practice of Law. Previously she was a federal prosecutor in

the United States Attorney's Office for the Southern District of New York for seven years. As a prosecutor, she focused on violent crime and securities fraud and conducted numerous jury trials. Her teaching and

research interests are in criminal law, white collar crimes, and evidence. She also worked on Governor Andrew Cuomo's Council on Community Re-Entry and Reintegration, which addresses obstacles formerly incarcerated people face upon re-entering society. (PERFECT! One to keep a lookout for ideal political candidates and the other to empower them. Xi must be proud of himself).

This power couple has been making sure businesses, institutions, and citizens pay their federal debts and taxes. Lawsky is who spearheaded the BitLicense regulatory framework. This is the guy Bitcoin holders HATE!!! Why? Because his regulations made it nearly impossible to obtain a license. Since then, only a few licenses have actually been awarded, and a still-active legal effort aiming to undo the BitLicense remains ongoing. Which is, to this day, why you can't use many exchanges if you are based in NY. That took shape in 2013 and 2014 and came into effect the following year. Then, in 2017, Lawsky joined Ripple's board of directors. Looking back, the regulations was obviously a stall tactic so the Financial overlords could figure out how to control this shift to digital assets so they could insure the taxman got his money. Plus, lots of money flows in and out of NY...I am sure they wanted to monitor those capital gains.
