Here is the python script I wrote:

<https://github.com/lunarnautics/saved-reddit-posts/blob/master/redditsaver.py>

I have set it up with a GitHub action to backup Autisticats, TheGloryHodl, and RatioAtBlessons every 30th minute (once an hour). The saved pdf's can be found here:

[Autisticats](<https://github.com/lunarnautics/saved-reddit-posts/tree/master/Autisticats>)

[TheGloryHodl](<https://github.com/lunarnautics/saved-reddit-posts/tree/master/TheGloryHodl>)

[RatioAtBlessons](<https://github.com/lunarnautics/saved-reddit-posts/tree/master/RatioAtBlessons>)

If you want to run it yourself on another sub, you will need to modify the Reddit credentials as described [here](https://www.geeksforgeeks.org/how-to-get-client_id-and-client_secret-for-python-reddit-api-registration/) and modify which subreddit you want to backup. After that, run it like any other python code!
