I'm a swiss APE and in this since the beginning. The Question i ask myself: What needs to happen so that GME squeezes? I look at the fake numbers from ortex, fintel, stonk-o-tracker.

How can it be, that there are plays with way more disgusting numers. Redbox RDBX for example has a short interest of 154% of the float and a short borrow fee rate of 960% .

Is it reality that the system can f\$ck me with measueres whatever it takes to destroy a stock/company and my investment as a retail investor? Why should i invest 1 day longer in the stock market?
