So, we all know Buy, HODL, DRS is the way. And I'm not condoning options in any way, as I'm not that sophisticated.

But here's my question. When buying GME, let's assume the majority would be in it as longs, why not exercise every option? The SHFs are expecting them to expire worthless, and therefore make a killing. But if all apes are long, those 100s of shares will surely appreciate in value during MOASS.

Remember when people were saying it doesn't matter if your cost basis is \$40 or \$400 when the shares are trading at \$69,420,000 per, right? So, if anyone does play the options game, just effing exercise all options. I mean, who cares if it costs you \$500-\$2500 more?

Anyway, just a thought.
