Linked Post Content:

So If i had to explain my thoughts on what is going on with all of these companies that i have dug up according to the tweets, it's kind of simple to me. They were all vulture capitalized and then highly manipulated and then bankrupted. You know... that mafia "burn the house down for insurance" play.

They had to roll the shorts out into LONG DEEP ITM CALLS, like the ones that are in the holdings of IFP ADVISORS. GME 1/21/22 4\$ call? Why? Wut doing IFP?

You really think that 4\$ call is a good idea do you? I say bad investing habits make them "cover" the shorts , not "close" them. By owning a deep ITM call for any of the meme stonks i think it's easy to see which comp[anies are covering for Kenny and the boys.

I will assemble the proper links to fill this post out tonight. Having to be pretty anonymous to be able to use this site atm.

I just wanted to plant this seed for all of you. I was able to share my thesis with the big wrinkles and they said no shit. Yeah. <3. something something flex options would be the only other explanation.

These zombie OTC stocks are rising because of the re roll out of those DEEP ITM calls they have. They are forced to buy zombie shares. They need to roll their calls out xD. Institutional squeezes anyone? We call that collusion and manipulation.

Wanted to share this knowledge. Tear me apart if you would like to :)

The L bond video I did shows these calls in IFP very clearly:

(i had edited to remove crossposting and pasted misterfix's upload from a few months ago. The censorship in reddit is very alive and real.)

CAN'T STOP WON'T STOP.

#SimulationConfirmation.
