

Title: Prisoners Dilemma. Regarding the recent price action: have anyone considered this possibility?

This thought just suddenly came across in my smooth brain when reading the subs. Below is my attempt to consolidate what has been happening recently. Any comments is welcome.

This is what we know:

- We are approaching the anniversary of the sneeze, which means Long Term capital gains for many people who bought in Jan 2021.
- It is very highly possible that synthetic or phantom shares exist, especially given the volume traded during Jan 2021.
- Not 100% of the float is DRSED yet. Will some investors sell at the Long Term capital gains mark? Maybe yes.. That might be one of the reason why some investors chose not to DRS. I know the mantra here is diamond hands and DRS is the way, however the entire stock market is much more than us here (institution/HF etc) and they will do what they do..
- Now, if you are the MM (issuer of synthetic/phantom shares) and GME buyers from Jan 2021 sneeze started selling for profit after Long Term capital gains, the MM will need to pay out as the synthetic/phantom shares position is closed for a profit. This is where I think they asked for a cash injection: to survive the closing of these synthetic/phantom shares.
- Suppressing the price of GME will help MMs and result in a lower payout when those synthetic/phantom positions are closed. The downside is this allows retails and Apes to buy more shares and DRS to lock the shares faster. This, I believe is the prisoners dilemma that the MMs are facing and why the price action is so violently downwards after trading in 150-250 range the past 11 months.

I believe this is just another attempt by those criminals to survive one more day and kick the can down the road. If you believe in the company and nothing changes, there is no reason to be afraid. Instead, let's DRS even harder and aim for the finish line.. To infinity and beyond!! ■■■■
