User_api.ts uploaded an hour ago to GitHub under the sdk...

[Users_Api](https://github.com/Loopring/loopring_sdk/blob/master/src/api/user_api.ts)

This is 1500 lines of coding that I don't pretend to understand all of it but I know it is all the functions necessary to mint NFTs, check wallet balances and transfer between users.

Also of note is a readme in the protocols from 13 days that explains minting.

[read me](https://github.com/Loopring/protocols/blob/release_loopring_3.6.3/packages/counterfactual_nft/README.md)

Translation: sooner than you think later than you expect

Edit: there is no mention of a partner this is the technical code for anyone to use
