Body:

Hello all,

Firstly, thank you for all being so informative and asking good questions that have guided me through the early stages of my algo-trading journey.

I wanted to link my Python/Binance bots (https://github.com/c-s-westphal/Binance-Trading-Backtest-and-Bots/blob/main/Lin_reg_trader/linreg_5min.py) (https://github.com/c-s-westphal/Binance-Trading-Backtest-and-Bots/blob/main/Lin_reg_trader/linreg_5min.py) GitHub so that you lot could tear it to shreds. I have only been coding around a year now and without any formal teaching, so I feel as though now is a good time to try and engineer some free help to prevent picking up really bad habits. This is primarily for sad Oracles on here who want to feel superior to me, but if your a proper fucking cowboy you can use this code yourself.

I have also back tested ML and Linear regression based strategies which can be found here: (<https://github.com/c-s-westphal/Binance-Trading-Backtest-and-Bots>) (<https://github.com/c-s-westphal/Binance-Trading-Backtest-and-Bots>)

Thanks in advance for any advice!
