

Title: Today, the ORTEX Short Squeeze has triggered both a Type 2 and Type 3 signal. The only other time two or more signals were triggered was the weekend before the January Sneeze. (It triggered all 3)

There's the history of the different ORTEX signals. They detected the sneeze on the weekend when that Friday's close was 75. As well know, we would hit as high as 330+ in the very next days.

We've triggered 1 signal before which was a nothingburger. But never 2 signals so this is new. January hit all 3.

I believe ORTEX called it for sticky floor's stock rise to 70 dollars as well but I don't follow that stock that much.
