#### Linked Post Content:

I made this username with the intention of having an easily attacked username due to politics. I made it so certain other people would see me and send me information.

It's worked like a charm. Now if I make a post at the wrong time of day I get mass downvoted. Anyone who comments on these posts being a positive ape for GME is mass downvoted.

# Edit: In a matter of seconds this post dropped from 45 upvotes to 26. This is not a coincidence, and it is not organic voting. Organic voting would have natural downvotes come separate from one another. Upvote percent dropping 40% in seconds after steadily staying in the 90s for an hour is extremely telling.

The accounts doing this almost ALWAYS have a 95% or higher comment karma to post karma. That means all they do is comment. Some of these accounts have 150,000 comment karma, 1000 post karma. It's clear these accounts only exist to shill. It's clear these accounts stay in the shadows of comments since posting makes your username much more visible to SuperStonk

What I'd like to ask the mods to do is this...it's simple. We have Satori? So why don't we use Satori to find these accounts really easily... if Satori can have parameters added to include any account with a high downvoting percent than usual, like 10 downvoted an hour type rate and on accounts with high comment karma compared to post karma, we could significantly reduce the amount of BS accounts attacking apes in SuperStonk.

I'd just like for you all to consider this, and think about it. \*\*\*I get attacked every week, and I'm different, I'll keep persisting. But not all apes are like me and give up when attacked like I am.\*\*\* What happen to all the apes who used to be straight positive always...let's upvote all other ape posts...what happen to that positivity? And why is it okay for people to be mass downvoting positive comments? If you say you don't believe me, then tell me why I see my post vote counts drop by 12-20 in seconds after it took 20 minutes to gain those votes?
