GameStop: Let's say we want \$1-Million per share minimum, with 76-Million total shares, that's \$76-trillion without including any other stock squeezes which have many more times the outstanding shares than we do. Our national debt is less than half of that. We're looking at possibly \$Quadrillions\$ in payouts at just \$1-Million per share. Is that possible? If so, how? Does that kind of money even exist? I sure as hell hope so! I greatly appreciate any real responses.
