Shorting is when you borrow someone's share
and sell it, with a guarantee you will
eventually buy and return the share

There is a stock, **\$GME**, which has been
excessively shorted by hedge funds

Regular retail investors are buying these
shares and registering them directly to their
name, and have already secured upwards of
10 million shares

Once the entire float of shares is
registered, short sellers will be forced to
buy back shares at
any price

After registering the float these retail
investors plan to hold until tens of millions per
share (currently **\$190**) and you can join them

**SECURE YOUR FINANCIAL FUTURE TODAY.
BUY AND DIRECT REGISTER \$GME.**
It may never be this low again
