

Title: As the SI report calculation changes. The new SI report can no longer exceeds 100%. Will that be the new FUD?

Dear fellow apes, Correct me if I'm wrong.

I came across to a post in SS, it was saying the SHF is somehow lowering the Short Interest a lot. As a smooth brain ape and a long time lurker, I don't have enough "Credit" to post or comment in SS. I want to suggest that it might be related to the S3 SI calculation method.

Thanks to u/Cataclysmic98 and his [DD]([https://www.reddit.com/r/FWFBThinkTank/comments/wbo3de/reminder\\_reported\\_short\\_interest\\_si\\_will\\_never/?utm\\_source=share&utm\\_medium=ios\\_app&utm\\_name=iossmf](https://www.reddit.com/r/FWFBThinkTank/comments/wbo3de/reminder_reported_short_interest_si_will_never/?utm_source=share&utm_medium=ios_app&utm_name=iossmf)).

It explains the previous SI calculation should be  $\text{Shorts} / \text{float}$ .

On the other hands, the new S3 Formula =  $\text{Shorts} / (\text{shorts} + \text{float})$

The S3 formula assumes there is no synthetic shares/ naked shorts. IMO that's extremely unrealistic, not only for GME, but in the whole rigged market.

My question is why are they switching SI calculation method at this particular time? I believe The End is near, and DRS is truly hurting SHF badly. It is literally the manual form of stock recall. We save our own beloved stonk, and we will not stop.

TL;DR, the low SI reports is probably related to the new calculation method. Hedgies r still fukd.
