In two days it will be 16 months since I purchased my first GME share. It has been a fantastic journey so far and I want to do my part to make sure the spirits remain high.

I wanted to draw a brief parallel between our journey and the journey of arguably the most prominent scientist ever.

We have established that, without a doubt, the system is and has always been corrupt. When Einstein was doing his thought experiments for Special Theory of Relativity, he found that a light beam inside a train that is also travelling at the speed of light isn't frozen contrary to what the masses believed based on Newtonian physics. He found that because Maxwell's claims about light were that the speed of light was constant and nobody can reach the speed of light. So, either Newton or Maxwell was correct. Not both. Einstein thought that if the light beam isn't frozen inside the train, then there must be something that's helping the light beam to stay ahead and have greater speed than the train. Einstein came up with this thought experiment roughly when he was 16. It took him 10 years to come up with an explanation and his special theory. The general theory took further 10 years and almost caused him a breakdown as he suffered to find a solution.

This all may sound absurd, boring, and irrelevant but this is what systemic changes look like. It takes an incredible amount of mental effort, concentration, wilful separation of logic from the 'common sense' and 'beliefs', and pure passion towards the attainment of your goals that have been set in place by logic and driven by your desire to make the masses see the truth.

Wall Street is like the early physicists that unshakeably believed in Newton. And, believe it or not, the apes are like Einstein who have discovered flaws after flaws in our financial system and are asking questions that (1) have not been dared to ask (2) make Wall Street uncomfortable (3) apparently pose idiosyncratic risk to the 'system'. For the first time in history, retail investors have the tools and more importantly the numbers behind them that makes their voice loud. People like Dave Lauer, Wes Christian, and Dr. T are like the patent office clerks. Me, my ideals, and together with hundreds of thousands of apes and what these apes stand for are the uprising of a new belief, a 'new financial world' and a new system that is not built on Wall Street's ideals of greed, inequality, and corruption. We are building a new system that is fair to everyone who participates in it, where information isn't owned by a few people who first create a strategy for how to use that information before they make it accessible to public, where people ask questions that makes the authorities uncomfortable which leads to change instead of creation of more rules that makes the glass ceiling higher and more opaque. But this is just the beginning. I and the thousands of apes are the early adopters of these goals.

As I move forward, I know I must show the same resilience that the greatest minds in history have shown. I know what I stand for. I know the apes do too. It started with a gaming company, to drsing my beloved shares, reading and fuming about the state of our markets. It will end with - the way you and I want it to end.

I remember a line from a movie on Netflix called the Siege of Jadotville - "We all have a part to play in history. Yours is happening right now."

As we approach the earnings report and the AGM, I just wanted to make sure that you don't forgot how big and strong your ■■■ are.

Buy or don't buy, drs or don't drs, hodl or don't hodl it is up to you. "As for me, I like the stock".
