Amidst generalised pandemic and deaths for lack of sufficient medical resources, environmental collapse by fire and flooding, the market reply is: let's have fun in space and make plans to colonize Mars. To make it prettier we all made this possible by working our a... out for lower wages (everywhere) or paying taxes through the nose to compensate for the ones their corps avoid. Congratulations! ■■■■■ ... Now if you listen to the interview carefully he says he wants to move all polluting industry into space to keep Earth pristine... Here I am divided among three thoughts: 1) the footprint of his corp. activity and parcels today 2) the knaiveite of the fact that there is not enough rocket fuel to launch into space even one thousandth of the equipment needed and even how polluting that would be (unless if he plans to invent anti-gravity) 3) even in the utopian basis you could do that, would not it mean exiling the working ones to space and converting Earth in a natural reserve for the wealthy who don't have to work in industry (?) Pretty dark. I don't know what to suppose. Forced to judge by his words, I just do not know what to make of all this... The present and the future (if these are the ones in charge) seems dark and it's clear the economic system does not work and there is no replacement in sight. I say in 5 generations population will halve and pollution soar. We will not see another 10,000 years as a race, that is my bet.
