Good morning Apes....

I did some digging and tried to put some sense to what happened last Tuesday when they turned off and halted GME.

My argument is that after all the DRS... the buying and holding.... that GME around \$200, is putting the same pressure on Hedgies as \$480 during the baby sneeze.

Lets look at IV - what is IV? IV = Implied Volatility... the definition is...

Implied volatility is **the market's forecast of a likely movement in a security's price**. It is a metric used by investors to estimate future fluctuations (volatility) of a security's price based on certain predictive factors.

In **APE terms** \- IV is the options chart for the stock... lets take a lot...

Take GME IV Chart....

[No surprise that it looks exactly like the stock chart.](<https://preview.redd.it/ra8x074fg3s81.png?width=1784&format=png&auto=webp&s=b9ad4dfb82d91ad98b0557cfd24bea42289f1480>)

(<https://www.alphaquery.com/stock/GME/volatility-option-statistics/30-day/iv-mean>)(<https://www.alphaquery.com/stock/GME/volatility-option-statistics/30-day/iv-mean>) Is where I am pulling the IV... its a free site and looks decent enough...

[Well on second thoughts.... its a little difference... ](<https://preview.redd.it/gb1ft7vbwg3s81.png?width=1308&format=png&auto=webp&s=10c4dc2c2eec77a343aff051ecaba5b3d69e1aab>)

In the white chart above you can see that the options IV did not change much except for during the sneeze... This tells me the the options were holding pressure before the Sneeze, much like today.

[GME traded from \$75ish to \$200 in the last up cycle... ](<https://preview.redd.it/nf0xpeanh3s81.png?width=1297&format=png&auto=webp&s=43a3fa222f85b6cf115b99904694da229b477fd4>)

Hedgies turned it off that Tuesday morning. Apes almost blew the roof off again

[HEDGIES ARE SCARED.... \^^\^](<https://preview.redd.it/v5rwxlowl3s81.png?width=908&format=png&auto=webp&s=34d31465ca278beb357ed79714715a44a4bb65b0>)

[IV has been trending Up.... ](<https://preview.redd.it/46rvrlnbi3s81.png?width=910&format=png&auto=webp&s=de6d69b16c53e8c85bbaf1775b8ee5d4dde8cf85>)

And IV has been trending up... Since GME trended down in November of last year... **\*\*WHICH PROOFS MY THEORY THAT THE OPTIONS HOLD THE PRESSURE TO KEEP THE STOCK DOWN....\*\***

[SINCE the all out Blitz in November,,, IV Has gone up as the stock the went down, and reversed recently... ](<https://preview.redd.it/e96vazlji3s81.png?width=1323&format=png&auto=webp&s=e1cbaac25a103a1f00150cc22c4979491f988059>)

[So where did the IV go?](<https://preview.redd.it/zz0u1rj1j3s81.png?width=500&format=png&auto=webp&s=c379a5b85e92a6d06a746f820ac03b6d20c0f676>)

The Hedgies are rolling it out in to further out Contracts... How do I know?

Look at the IV from last week... I noticed the weekly IV numbers started going crazy near the end of the week....

[GME call... on left 7000% Price move for the purple line... ](<https://preview.redd.it/00fnapnfj3s81.png?width=548&format;=png&auto;=webp&s;=f6c98c7deb48e66dc5e463a1744ff937b641a3d9>)

**\*\*AND most of the action is in the purple line.... they were using the April 1 weeklies to suppress most of the pressure...\*\***

[Have a look at the BLUE line \(\next week now, taken just now\)](<https://preview.redd.it/bhulupd4k3s81.png?width=754&format;=png&auto;=webp&s;=ea71ccc7690e73b499554725d9ea25d5548bfe55>)

Again if you compare the two volatility charts above... It shows that Hedgies and Shorts are now starting to use options again to hide manipulate more than before.

**\*\*TL:DR Hedgies are using the public options markets again to help with their manipulation. Since the DRS push in November the IV Has been under more and more pressure. Last week the weeklies were under massive pressure. This week, its the weeklies and next week.\*\***

Hedgies nearly blew up when the IV went to 1.5. I am now watching this and convinced when this bitch hits 1.5 IV we will see another halt or more mayhem.

**\*\*DISCLOSURE:\*\* I NEVER BOUGHT A GME OPTION OR WROTE ONE... I DRS AND HOLD STONK - NOT CONTRACTS...**

**\*\*The stock going down is one thing... and we obsess and watch over the stock - but the relationship between options and the stock tells a bigger picture - It tells me the pressure is building behind the scenes... even tho the stock is down a bit the last week - whats going behind the scenes is worse than before...\*\***
