So we all know that the algorithms run the market so I decided to write my own, it's actually pretty simple and works like a charm:

```
if (salary_received):
```

```
    Buy, Hold and DRS
```

```
if (by_accident_hits_sell_button):
```

```
    print("Error, wrong button")
```

If you could all implement this, that would be great.

Apes to the moon. #GME
