Simple discussion question heading into the weekend. What the fuck is going on with the price. We've broke south and slow bled to 184...this is odd to me using pure logic.

Apes are drsing beyond belief at the moment and yet price is dropping. What the actual fuck is happening here? I'm too smooth and need an adult! Just simple logic tells me it should be going up in price...

Anyways. I'm gonna get off reddit for the weekend. Just feeling really anxious and the price today just got to me...I just can't believe this can keeps getting kicked and kicked and kicked....
