They're doing SAP now?

> Modernized and strengthened the Company's systems through the implementation of SAP.

Looks like they truly were running off mainframe era technology...

Anyone have the details on this? As far as I know, the costs of implementing SAP ERP is around 25+ million for a small enterprise. Integrating an ERP into a business is a great way to win in the data era.

However, it surprises me that its this late into the game and they're pivoting to an off-the-shelf vendor; I'd be curious to see how the ERP handles NFTs and whatnot.

I didn't see a thread here regarding this, and in another thread where I mentioned them using mainframe with production code from the 80s, it seemed many people doubted that fact...

Overall, I think GME is going to need to bring in more IT staff to manage this transition rather than trying to outsource to contractors.

If they want to build long term growth, they need the in-house developers for the platform, not contracting external vendors who'll copy+paste the code for other brick and mortars.
