#GME can choose to distribute their shares or dividends any way they feel like.

This is just one example how a company that was heavily shorted was able to squash short sellers and see its price rise 17x thanks to the Digital Voting Series A-1 Preferred Stock.

#What are you talking about?

O - Stock Board of Directors approved the declaration of the dividend in the form of shares of Digital Voting Series A-1 Preferred Stock, (the "Series A-1 Shares") on April 6, 2020 (the "Dividend"). The Board has also set the record date for the Dividend of April 27, 2020 (the "Record Date") and the payment date of May 19, 2020 (the "Payment Date").

The dividend was issued in Series A-1 shares on a 1:10 basis to all O stock shareholders as of the record date of April 27, 2020. O stock distributed the dividend shares through its transfer agent, Computershare, to investors' brokerage or other custodial accounts in which they hold their O stock securities, and no action by shareholders was necessary for them to receive the dividend.

#Description of the Series A-1 Preferred Stock (the "Series A-1 Shares")

The Series A-1 Shares currently trade under the symbol "OSTKO" on the alternative trading system ("ATS") operated by tZERO ATS, LLC, a subsidiary of O Stock and an SEC-registered broker-dealer and member of FINRA and SIPC (such as ATS, the "tZERO ATS"). The Series A-1 Shares are preferred shares and a separate class of stock from O stock common stock, which trades under the symbol "OSTK". The Series A-1 Shares have similar rights to the shares of common stock and participates in any dividend paid on the shares of common stock. The Series A-1 Shares, unlike the common stock, may be paid an annual preferential dividend if declared by the Board.

#What so cool about your preferred shares and why would people buy them off me?

The Series A-1 Shares, unlike the common stock, may be paid an annual preferential dividend if declared by the Board.

The preferred shares have already received two dividends (2020 / 2021)

#How will this help with transparency?

The Series A-1 Shares are uncertificated securities reflected on the records of our transfer agent, Computershare Trust Company, N.A. ("Computershare"). An uncertificated security is a book-entry security for which no paper certificate has been issued.

The term "digitally enhanced" references the blockchain technology elements that have been added to provide features that investors should find will enhance transparency. The use of blockchain technology provides enhanced transparency by allowing investors, broker-dealers, and regulators to see a courtesy carbon copy of the transfer agent share register (which controls in all cases as to record ownership) on the publicly available, anonymous distributed ledger, and which is available solely for convenience.

#Ok, cool. I like what you're selling me but how do I get this and what do I need to do?

Investors are not required to take any action in order to receive the Dividend. On the Payment Date, investors should see their Series A-1 Shares reflected in their brokerage or other custodial accounts in which they hold their O stock securities.

#How can I sell this share if I am a paperhanded melter?

An investor can trade the Series A-1 Shares on the tZERO ATS in two ways. An investor can open a brokerage account with a broker-dealer that subscribes to the tZERO ATS and executes trades in the Series A-1 Shares (a "Subscriber"). A Subscriber is a broker-dealer approved to trade securities on the tZERO ATS and executes trades in the Series A-1 Shares. Alternatively, an investor can open an account with a broker-dealer that maintains an account with a Subscriber.

#Do 401k and IRA accounts qualify?

Yes. Shares held in IRA's are eligible to receive the Dividend but may be subject to certain restrictions in order to make sure that the Dividend remains in the IRA and not treated as a distribution from the IRA. If there is a desire to sell the Series A-1 shares, please note that authorized custodians are able to create an account with Dinosaur Financial solely to execute sales of Series A-1 Shares, and that Dinosaur Financial itself is not an authorized custodian for IRAs.

Yes. Shares held in 401(k) plan accounts are eligible to receive the Dividend. Certain plan custodians restrict the ability of 401(k) plan participants to elect investment in or divestment of in securities such as the Series A-1 Shares, which do not trade on a national securities exchange but is limited to trading on the tZERO ATS.

#Do I really need a digital wallet to get my shares?

No. The Series A-1 Shares are not a virtual currency or another form of anonymous bearer digital instrument. The Series A-1 Shares are conventional uncertificated securities for which a "courtesy carbon copy" of certain transfer agent records are maintained on the blockchain.

#So there you have it. This is how you will see a preferred share distributed using Computershare transfer agent.

In addition, DTCC is working on pilot projects that tokenize securities and also offer an instant settlement process.

Brick by brick you will see the traditional markets slowly transform.
