Linked Post Content:

GME will run decentralized apps through their website browser and iOS app. There will be many more to come, but by far the most important (in the short term) is 0x ZRX using ERC-741 Protocol (ERC-721 and ERC-20)

Link from https://wallet.gamestop.com scroll down to see Image below showing the circle of partners as confirmation of partnerships. But what does 0x do exactly?

[GME, ETH, LRC, IMX, 0x ZRX, UNI](https://preview.redd.it/u9ttowlmcrx81.png?width=3900&format;=png&auto;=webp&s;=910133b4e29c4c4d9e9eb101a33ef62f58e2c944)

ZRX Token (likely dividend awarded to shareholders) = Voting share. Will house future shareholder voting and counting. (DAO's, Governance, Voting platform for shareholders)

https://0xdao.gitbook.io/0x-dao/

0x is Decentralized finance company that has its functions performed for the companies it works with on the blockchain using ZRX. It works directly with Crypto Brokers like Binance, Coinbase, and now LRC/GME.

■■■With 0x, users can create markets for representing any form of value – these could include markets for tokens representing physical real estate, to tokens representing shares of stocks and bonds, to tokens representing other crypto assets. 0x is important infrastructure for the emerging crypto economy and enables markets to be created that couldn't have existed before. As more assets become tokenized, public blockchains provide the opportunity to establish a new financial stack that is more efficient, transparent, and equitable than any system in the past. ■■

Using the 0x protocol, users can both tokenize assets and buy and sell tokens running on the Ethereum blockchain.

0x will allow anyone to Automatically create orders that can be passed directly through your smart contracts (LRC) to be settled on-chain. (ETH) in GME Wallet.

Two types of users are needed to operate any 0x market:

* **Makers** – Those providing liquidity to the order book. Makers place orders on the exchange that do not trade immediately; rather, they wait for it to be matched.

* **Takers** – Those who take liquidity from the order book. Takers place orders that are instantly matched with existing orders.

Folks. The definition of "Stock Market"

Stock markets are venues where buyers and sellers meet to exchange equity shares of public corporations.

Stock markets are vital components of a free-market economy because they enable democratized access to trading and exchange of capital for investors of all kinds.

They perform several functions in markets, including efficient price discovery and efficient dealing.

Why does ZRX have value?

The ZRX cryptocurrency derives value from the role it plays in operating markets on the 0x protocol, rewarding relayers for hosting order books and facilitating trades.

In addition, ZRX is also used as a way to allow users to govern the software and set its rules.

For example, users can stake ZRX to gain the ability to vote on network upgrades and policies, with each vote being proportional to the amount of tokens they stake.

Users can also delegate their tokens to other validators, allocating votes to them while still earning a portion of the block reward. **(proxy in market terms)**

Lastly, there is a finite supply of ZRX that can facilitate 0x markets.

As of 2020, only 1 billion ZRX tokens are scheduled to be created. This provides a certain scarcity to ZRX tokens, which could help their value increase over time.

0x works with (LRC) and not against many exchanges. LRC will take care of trading and 0x will take care of the back end of the securities servicing.

For example: Voting on board, share/token holder activism, Voting on vision, receive dividends, provides proxy, distributes filings, and it offers rewards for using that will likely be implemented into the dividends.

[Wonder who those Users will be?](<https://preview.redd.it/9zjex6iq8sx81.png?width=1186&format=png&auto=webp&s=79f1e72d94398fdb31c4d4917ab06b34e12a7e20>)

0x could allow GME to become the next source of decentralized funding for new companies looking to bypass venture capitalist and the wall of the elite. Think Shark Tank, but with the entire world through decentralized investors each contributing different amounts and having the same voting rep rights as shareholders.

0x is the global backbone for decentralized exchanges (DEXs), making it easier for teams to create or operate a DEX.

Building DEXs Made Fast 0x is open-source, if you want to start a DEX, you can simply use 0x's API and quickly tap into multi-chain liquidity. Making it that much easier to incorporate exchange functionality into apps designed on L2.

*Because so many businesses rely on 0x for their success, the 0x team needed a developer platform that could trust 24 hours a day to: - Scale infinitely - Maintain complete - data accuracy - Provide 100%

reliability*

*"Want to help build a tokenized world where all value can flow freely?" *■" sounds a whole lot like:*

Final Edit: 4 Facts to Consider before Replies.

1. 0x's business model described above is not a theory.
2. Their partnership with GME is not a theory.
3. The only theory is my *opinion* of the implementation of the two technologies, now that the partnership has been officially announced. LRC and others will have an equal impact on GameStop's NFT future.
4. I do not hold a single bit of 0x or ZRX.

What Cohen wants, Cohen gets. Master of supply chains in real and digital world.

Angry that an NDA is allowing the value of your token to tank because you can't assuage holders? Too fucking bad.

Gotta grow corn to make whiskey.

TL;DR

Gamestop and the Five Horseman of the Stockpocalypse

Just because a Billion shares will be authorized in June doesn't mean they will put a Billion for sale. They have to authorize what the numbers tell them for the dividend.

Outstanding Shares / Split (Dividend) + Shares Short needing to be bought and returned= What will be issued from the 1 Billion. Why the potential large amount left over?

SEC may not allow a split without confirmed numbers and because they cooperated together in an investigation (confirmed Dec 2021) they both know that's impossible without forcing a return. Hence 1 Billion shares authorized to deal with the theory of a .7 Billion Short interest count.

Ryan knows 2/3 parts of the equation, but that doesn't mean they add to a billion (later on) nor that they will stay that way after all outstanding shares existing are returned by recalling. This would trigger all shares including the illegal ones to be returned and reissued through dividend process (on Blockchain) with an SEC certified vote count.

We are about to see the ushering in of a new age of financial protection for individual investors. I believe

this is where Gamestop comes in. Someone has to pilot this new system and launch the very first American Security Token Offering (STO) as a replacement for the DTC defaulting on their fiduciary responsibilities. These shares/tokens will trade on decentralized lit exchanges as well as traditional exchanges (NYSE) while still being tied to the blockchain. Every owner tracked. Every share accounted for. In perpetuity.
