Who was pulling the strings on multiple brokers to ban clients from buying \$GME and causing panic selling as well as margin liquidations? By locking out investors, brokers took away the bid for the stock. The market makers then orchestrated a drop of 371 points, 77% with ONLY 8 million shares traded triggering multiple trading halts. It was brutal, especially, when GME only moved 10-20 points on similar volume on previous trading days. A full comprehensive investigation is necessary. Also investigators must take a close look at what happened to the options during that time. These criminals should rot in jail.

Edit: This video shows how they brought \$GME down 371 points (77%) and also how they brought down the \$GME options. It's a must see. <https://youtu.be/YKNIf2PHvf4>
