Is there a community that discusses the daily low/high price?

I want to run an experiment with just 10 dollars - make a market order at price 145 and take profit order at 150 for 3.448 percent daily income.

If it fails I lose the 10 dollars. Experiment over.

But my question is for this experiment - how can I make a sensible prediction for what the daily low will be? It will not be 145 everyday, somedays obviously higher or lower for gme.
