I put this in r / S S. Very little traction. Oh well. This is just an idea I had. Thoughts?

There have been two major hypes today that I am seeing:

1) the CS account number hype - BTW... IMPRESSIVE AS F&*K, Apes!!!!

2) people beginning to talk about how long it is taking to get their shares into CS.

I believe these two sets of data are going to end up being the most public sets of information that we will have about the impending MOASS...

As the number of CS accounts continues to rocket (see what I did there...) we are getting a pretty good estimation of the number of apes who are DRS.

There are some of our Ape quants out there who are showing standard distributions and coming up with some amazing numbers (look for posts talking about 80/20 distributions.

These will provide rough numbers of how many shares we are DRS. Obviously not exact, but probably some pretty good estimations.

But the two categories of posts that are really catching my interest is the growing number of Apes talking about checking on their direct purchases for CS or their transfers from brokerages....

AND HOW LONG IT IS TAKING FOR THEM TO SHOW UP IN CS!!!!

There is speculation that it is getting harder and harder to locate the shares for the purchases and transfers.

PLEASE NO PERSONALLY IDENTIFIABLE INFO.

But if apes began listing say:

(for transfers) brokerage, date started, # shares, date in CS

(for purchases through CS) date started, # shares and date completed

I believe a definite pattern will emerge and we can begin to get a sense of how shallow the pool of available shares is becoming.

Thoughts?????

Obligatory: These are my ideas and beliefs...NOT financial advice.
