

Title: Theory: Maybe it wasn't Citadel or short hedge funds holding us back today. Maybe it was a long whale like Blackrock.

Wow, what a great day to watch the ticker. I hope you new apes enjoyed your first rug-pull. I hope us old apes didn't acquire too many new grey hairs today. I'm enjoying my daily after-work SuperStonk sesh. I've got a nice homegrown Chocolate Mint here today. Cheers to all y'all.

Today was a ride! I really thought we were blasting off. It was super frustrating watching that price get hammered down. I'm pretty Zen by nature, and I've been here since the beginning, but I was feeling pretty fuckin' agitated this afternoon if I'm being honest.

Then I went home and smoked some weed. I always think better when I'm high. I looked at the chart, and I zoomed out to the 2 week. We are right back into an ascending channel. Go look, I'll wait, lol.

After I saw that chart I had a weedpifany: Maybe that channel was designed by the longs. Maybe the longs placed all of their bets to yield maximum profit in that channel. Maybe we are being slow-walked to Valhalla by the longs.

Maybe DRS has shifted the ability to manipulate the stock price from the short whales to the long whales. Long hedge funds like Blackrock do not have the ability to prevent MOASS because DRS has made MOASS a certainty. But long whales have the money and the shares to control the timing to a degree.

It would make sense that long whales would prefer a controlled ascent and bet accordingly. it would make sense that long whales want to control the countdown to MOASS.

I hope you enjoyed my story. Be excellent to each other and DRS.

TLDR: Blackrock has the means and motive to control the timing of MOASS
