If that is the case, roughly 300 million GameStop shares issued

~ 150 million float

70 million drs'd as of 8/1, that means if we were 50% locked, there have to be about 150 million held by institutions and insiders making the float 150 m if we were at abt 50% drs at that time

Just trying to put the pieces together and understand the numbers, my brain is too smooth for this

Any wrinkle brains can confirm I have the right idea or please correct me

Do any apes know what perfect of float we have locked as of 70m?

DRS is the way
