As many of you probably have, I've been noticing how the stock and crypto markets correlate with GME. So far, crypto have managed to escape a couple GME's drops but in general, they trend in a similar fashion.

What I want to focus upon the most is the stock market's performance. It seems more logical to me that during m0a5s, the rest of the stock market should diverge from GME and possibly drop significantly. In case my assumption is wrong, that would mean that the rest of the market would also skyrocket, which seems unluckily to me.

However, it is important to mention that this has not been the case the past few weeks and correlation between GME and the rest of the stock market is still quite high. Generally speaking, most stocks are green when GME is green and vice versa.

Thus, I wanted to know what the wrinkle-brained apes think about this.

\*Stay strong and\* \*\*\*DRS.\*\*\* \*Cheers.\*

Edit: most -> many
