Hello all. This is a small update to the volume data posts I have recently made. I have taken the %TSO data and the ranks (lowest = 1) of the individual days and plotted them on a graph.

Orange (is the new black...at least for Kenny) = the individual rank for that date.

Blue = the volume as a % of total shares outstanding. (V % TSO).

Black = the trendline for the rank numbers....

Graph:

<https://imgur.com/a/SJR4Y33>

Note: Date range the data is 10/28/2016 thru 11/16/2021. There are 1273 data points that make up the dates with trading.

I have only graphed data points that occur after 1/1/2021.

I added a trend line for the values of the ranks. Remember the lowest % TSO = rank 1, the highest % TSO = rank 1273. That is an impressive trend line.... down.....

****TL,DR: Volume and liquidity are drying up. ****
