

Title: We're all about to be filthy rich. A Speculation and Advisory; following Ryan Cohen's example.

Good Morning Apes,

-

I think that Ryan Cohen and the Board of Gamestop are initiating a precursor Stock Dividend to approach the approved Capacity of Class A Shares. By my accounting it would be in Gamestop and Investor's best interest to do a 3:1 Stock Dividend *prior* to the upcoming vote(s). This distributes approximately 152,680,000 shares to Shareholders which would put the total amount at 229,020,000. A 4:1 or higher would place the total number of issued Class A Stock above the 300,000,000 Capacity.

-

As a bonus I would imagine that a Stock Dividend for GME(RICA) ENTERTAINMENT LLC, (Supposed subsidiary/child corporation that will govern/manage the NFT Platform,) in the form of NFT-ized Stock would be a methodology for rewarding *Foundational* Investors and Equity-Compensated Staff who have enabled the *transformation* of Gamestop and the *desolation* of Wallstreet Corruption.

-

A step further now, shall we? Suppose that Loopring, a Blockchain focused FinTech entity, has been working with Gamestop and Ryan Cohen for the last 2~ years. (Matt Furlong and Matt Finestone you are bestowed the title of *Haus*.) An organization gathered around the purpose of empowering the individual to control their finances, and afford them protections against Governments, Federal Banks, Crony Capitalists, and Corrupt Financial Networks, (I.E. Big Banks.)

-

Loopring uses Smart Contracts which serve as preconfigured and preprogrammed automated transactional mechanisms. Loopring uses Smart Contracts on its own Smart (Counter-Factual) Wallet in order to operate an Automated Market Maker (AMM) that effectively aggregates Crypto Currency allowing for (within parameters) cheap and easy exchange of said Crypto Currency according to supply and demand. In example, USDC to Loops, or USDT to AMP as-demanded/as-needed. Loopring does all of this on their own Layer2 design which internalizes Ethereum Blockchain Transactions. Doing this avoids and reduces costly fees that the user would otherwise pay on Ethereum Layer1. These fees are measured in Gwei, and by Loopring's design some of these fees collected on Layer2 are distributed to AMM Participants as compensation. (Think of this as interest.) Now imagine that the NFT Platform supposedly governed by GME Entertainment LLC also utilizes these Smart Contracts to establish similar services with similar results.

-

Now, come with me and dare to dream. What if this NFT Platform has been operating for quite some time. What if it has *active* wallet addresses that have been quietly interacting with Centralized Exchanges. What would they have been doing? I would hazard to guess that they have been trading liquidity, exchanging one currency for another when the exchange rates are high enough. Why? This establishes a hedge against outsiders with hostile intentions as the NFT Platform is gradually made available to the world at large. This would mean that Gamestop has been feeding USD to Crypto Exchanges/Services in order to receive Crypto Currencies like USDC, USDT, Loops, IMX, and so on... This would mean that *if* they did a Stock Dividend for the NFT Platform they could potentially distribute or make available Crypto Currency they have been procuring in the form of Dividends. This would set up **Foundational Investors and Equity Compensated Staff** to not only receive Fee-Based Compensation from the NFT Platform's AMM, but make **them** a semi-permanent part (and support structure) for the NFT Platform and its

Systems. Semi-permanent income/cash flow.

-

A quick review: A Gamestop 3:1 Stock Dividend from 76,340,000 to 229,020,000 out of 300,000,000. Potentially, an attached NFT Stock Dividend for the spin-off/child company GME (RICA) ENTERTAINMENT LLC governing the NFT Platform, and *then* distribution of Liquidity Share (Crypto Currency) to be placed in your Layer2 Wallet which affords you semi-permanent income for providing Liquidity to the NFT Platform. (As Loopring says, "Be your own bank!")

-

What comes next? The vote(s). The 300,000,000 Class A Stock Capacity becomes 1,000,000,000. What does that allow? 229,020,000 Class A Stock to undergo a ****SECOND DIVIDEND**** of 5:1 which gives each Class A Stock Shareholder an additional 4 Class A Stocks for every 1 they own. A total of 916,080,000 out of 1,000,000,000 Class A Stock Shares. This gives room for later Equity Compensation, and minority buy-ins for ****New Apes****. Now, dreamers, stack on everything I said about GME (RICA) ENTERTAINMENT LLC NFT Dividends, and Crypto Currency AMM/Distribution.

-

What does this accomplish? First off, it smothers the Corrupt Cronyists and Plutocrats and their ass-backwards system. Secondly, we then have the assets and materials as to impose the change we would like to see on the world. Poverty, disease, hunger, pollution. Peace in our time. A new world with a rotting corpse of the Corrupt, Dark-Money fueled Hegemony to act as fertilizer. No longer under the thumb of hedonistic Plutocrats and Cronyists, we call the shots. We have authority, and an ****duty**** to follow Ryan Cohen's example. Be not just an Ape, but a Silverback.

-

****Power to the Players****

-

>I have been sitting on this for awhile for [obvious](<https://i.imgur.com/UaLpJOK.png>) reasons. Please excuse any errors or misconceptions you may find in my post. I am a humble retard, and unemployed layman cracked out on caffeine. I hope the punch has tasted *phenomenal*. I am excited to read your *constructive* feedback.

-

Much love,

AsTheSkyTurns
