Hi everyone!

TLDR:

1-torrent magnet links up for all posts and mnews articles and dd drop (small one at 35gb). how to use: find the ID of the post you want from the excel file - navigate to online or offline copy, depending how big of an archive you have downloaded. full archive will be shared as time goes on.

2-hype videos section added, added video section on useful to watch videos that have been shared elsewhere.

Original post:

As promised, I am coming back with a few updates - as promised I have created master files so you can see and explore them at your leisure.

IN this post you will find links to the site ([apehistorian.com](https://apehistorian.com/)): where you will find magnet links to all the DD posts and many other posts.

as you may have seen there are multiple new pages, please click on the hamburger menu to see all the new content: a few are still hidden but do check out the WIP work that is [https://www.apehistorian.com/hype-videos](https://www.apehistorian.com/hype-videos) \- the plan is to have EVERY hype video in there.

I appreciate in the ddintogme sub there is no memes. and thats fine. but the content is there should you wish to watch it.

Without further ado the site is undergoing massive changes which will be live in about 6 hours (its currently updating with an extra several pages).

However, after the events of the last few days its becoming very obvious to me that the dd may not be safe with one person or two people - which is why i am releasing several torrent files to preserve what we have.

Why torrent and not resilio?

the simplest reason is torrent is much more popular technology and while its static, aka i can only share beautiful\\_torrent\\_ofdd1 and cannot update it as new dd is saved, it provides a good static way of sharing \*\*\*"most" of the dd. and id rather this get 100 seeders rather than 10 people who are willing to read new instructions and figure out what to do with new tech.\*\*

first of all thanks to everyone who replied in the poll around how much storage space you have to share: we are focusing on the lower ranks and i am making an assumption that everyone has 50gb spare if they need to.

second of all if anyone has any doubts about whats in the files: here is ONE OF the posts by [/u/criand](https://www.reddit.com/u/criand/) to show how it looks like: [https://transfer.sh/vXPOYE/pb1qyx\\_DDintoGME\\_post.html](https://transfer.sh/vXPOYE/pb1qyx\\_DDintoGME\\_post.html)

smalltorrent: use this if you have 1gb storage space: download the "posts" and "news" torrents to get a list of all posts that i have saved (see backup\\_id\\_copy whether its backed up or not) and then you can

always dl the offline version.mediumtorrent:i have 50gb free space: download above and download the "main dd" torrent: a collection of the DD sub (you know which one) and other subs posts - only the dd though. in total its about 30k posts with some duplication, and around 35gb.NOTE that while the download size may be smaller if i zip the files, i want to provide transparency and show what is inside the zip archives so that you can see for yourself that it is just posts and comments. nothing else.

#### SMALLTORRENT: POSTS AND NEWS.

smalltorrent\\_ posts: magnet:?xt=urn:btih:3381b121573af0a1a1e2e8613e24d390ee0a60bb&dn;=posts%5Flists%5F11%5F02%5F2022

smalltorrent\\_ news: magnet:?xt=urn:btih:5d01fdc0b35f6c7b8799d7be44c0ae899b2b6e08&dn;=torrent1%5Fmsm%5Fstories%5Fuptojune2021

there are multiple files here - going from about 586k posts down to about 250k posts, to ensure that anyone with any type of machine can open them. google sheets has a 5 million cell limit which means you will only be able to load in every post that has more than 10 comments. for this reason this torrent contains multiple files - from EVERY POST i am aware of, to all posts excluding memes and shitposts, to all posts that have more than 10 comments.

YOu may also see that a lot of "posts" are not backed up - thats because they are currently running and the scripts havent yet synced - the actual number of posts that isnt backed up is closer to 10% rather than 40%.

#### MEDIUM TORRENT:

magnetlink for medium torrent (35GB): magnet:?xt=urn:btih:2b3f705e0e3382396eab6412f25498f7bfda1d31&dn;=main%5Fdd%5Ffiles%5Fpossible%5Fduplication

\* UP NEXT in release 2:

\* large torrent: ALL POSTS THAT WERE EVER WRITTEN, but no video posts (ie they are included but you have to follow the links)

\* an export of all external resources - from SEC filings to PDFS of finra reports and everything in between.

I have a small ask: please submit links/posts that you read to [archive.today](https://archive.today/) \- it will really help preserve all the dd

if you can see that a particular URL is useful, please submit it to [archive.today](https://archive.today/) using the [reddit.com](https://reddit.com/) \+ permalink to create the link. this way, even if all of this effort evaporates, as long as people who have the excel file with the final links - they will be able to read and preserve what has been found

if you have any issue with the torrents please let me know: these will remain live from my side for around 6 months. by then I will have more up to date torrents being seeded.
