After reading again today about NFT Dividends it hit me: We have the ability to propose an NFT-Game Dividend. (Thank you u/ethervillage)

[Form 424B5 Filed June 9,

2021](<https://news.gamestop.com/sec-filings/sec-filing/424b5/0001193125-21-186796>) The Prospectus states:

> In the event of a distribution other than in cash, the Preferred Stock Depositary will distribute property received by it to the record holders of depositary shares entitled thereto, in proportion to the number of such depositary shares owned by those holders, unless the Preferred Stock Depositary determines that it is not feasible to make such distribution, in which case the Preferred Stock Depositary may, with our approval, adopt a method it deems equitable and practicable to effect the distribution, including the public or private sale of such property and distribution of the net proceeds therefrom to holders of depositary shares.

This indicates GameStop Corp. may offer another dividend other than cash. Their vision of late has been NFT's and what better way to bring their investors into the sphere than an NFT game? Not only is it in line with everything GameStop and NFT, but it is entirely marketable and could therefor fulfil the second half of the aforementioned quote. The Preferred Stock Depositary determines its not feasible to distribute due to short selling (The DTCC) now has an NFT that is marketable, because let's face it, a monkey riding a rocket ship pic x75mil shares has little value to non-apes. A game has so much more marketability and lines up with the gaming industry.

Not only would a game NFT lineup with recent GameStop agendas: it would expose if naked shorts exist, be extremely marketable, prove their low-cost minting to the public and be mad cool. Each share's NFT could be an exclusive user or access code. Maybe an MMO, the possibilities are endless.

[In the GameStop and Immutable X Partnership Press Release](<https://news.gamestop.com/news-release/s/news-release-details/gamestop-forms-partnership-immutable-x>):

> The partnership establishes an up to \$100 million fund in Immutable X's IMX tokens, which the parties intend to use for grants to creators of non-fungible token ("NFT") content and technology.

It would make 0 sense for a gaming company to make NFT pictures and distribute them to it's shareholders. GameStop is putting aside money with it's partners for creation of NFT \[games = gaming\] content and technology and could share with their diehard followers.

I do not have enough shares to propose a shareholder proxy statement. I will be mailing a letter to GameStop Corp about this. Please let me know if there is anything I should add to my letter. Feel free to ask questions or point out flaws.
