If we count up the number of shares registered via [computershared.net](<https://computershared.net>)'s reddit scraper, we see that 501k shares = 5.2M shares locked up.

$5.2\text{m} / 501\text{k} \times 576\text{k} = 5,978,443$ additional shares. Let's round down to 5.9m Grand total of 11.1m shares registered. Of course this doesn't count shares that were previously in computer share, which may or may not still be an unknown variable. Does anybody know?
