I hope you don't mind me posting this here. I'm only a regular on another sub. But I'm thinking maybe that was dumb.

First, for those who don't know me, I'm the guy that comments and cheers on 90%+ of purple ring posts. I'm xxxx all in GME, 100% DRS (I used computershare flair so you can check the bot comment for proof) I've been here since January. I'm on here many hours a day every single day. I love encouraging and helping others. ■■■■. If you have questions or concerns, please comment or PM me and I will have, or find, the answer for you. Every single reply to this will get a response.

I'm going to keep saying this: There is nowhere near 700,000 of us on Superstonk and other GME subs. The vast majority of 'accounts' are bots, shells, dead accounts, and multiple accounts. Mods, can these be cleared out? I think it would be very generous to say there might be 300,000.

On the subject of the number of CS accounts ... yes, the high score account number being 111xxx means there are 111,000 accounts. However, there are many apes (5-7000 my best estimate) with 2 or more account numbers. I've spoken to many apes that have 3-6 different account numbers! So, you can't double-dip and use the DRSBOT average shares per ape and then also multiply that by the CS high score account numbers. You would need to deduct the number of duplicate accounts! This is exactly why roid_rage_smurf (DRSBOT guy) has added the new CSX feature. PLEASE support this! Simply go back to your original CS post and comment:

!DRSBOT:CSx!

where x is the number of different CS account numbers you have. Current data based on 115 CSX responses is 1.37 accounts per ape. This would mean the 111,000 would only be from 81,021 unique apes assuming this data continues to hold true. This would go a long way to explaining the October 30 5.2M "average shares per ape" as only 70.

It has taken from September 23 (25.4k) til January 15 (111k) to make another 85,600 CS accounts. I'd say the new account high score increase is going to come to a grinding halt by March. Then we'll be relying predominantly on new purchases to lock the float. You can already see on u/stopfuckingwithme 's high score post graphic, that the number of new DRSers are substantially dropping.

Next, all too often I see posts using ~33M as the float, but I'm convinced that is wishful thinking. Existing shares of ~75M minus insider shares of ~16M (even IF all of those are registered) = 59M shares that probably need to be DRS'd. Do you really think hedgies can't use institutional shares, mutual fund shares, and ETF shares to continue their F***ery?!? So, even IF there are actually 300,000 apes on Reddit, the average number of shares per ape would need to be 197 just to lock the 59M. Obviously this will take a much longer time to accomplish. If we DRS 5M shares every month from October 31 2021 forward, it would take us until October to DRS the 59M shares.

My main point is that locking the float in CS is going to take EVERY one of us DRSing very close to 100%. There are only 3 things that could change this:

1) The word about GME and DRS needs to be spread to the masses outside of Reddit in a big way. (Social media, word of mouth, website, banners, billboards, whatever). I recommend that when you tell others about GME, don't start with MOASS because most people will think you're crazy. Start with the massive turnaround GameStop is making and their fundamentals. Point them to gmedd.com. Later, after you have their attention, then you can talk about short squeeze potential. Then finally tell them about the importance of DRS. Side note: as much as I like gmedd.com for fundamentals, they do NOT believe DRS is important, so please use caution.

2) Enough apes with money tied up in other investments would need to convert those to GME. I truly love every ape !! But please PLEASE trade in your "other investment" now while you still can and help lock the

float. Even IF both MOASS , only GME has a turnaround plan that can propel us until it eventually does MOASS. Why split your ammunition when the float can be locked so much sooner by fighting the war on only one front?!?

3) I know this is a point of contention, but many apes have a ton of shares with Etoro and other brokers that will not DRS. I welcome HEALTHY discussion, but here is my two cents:

Selling at one broker and re-buying at another only results in a different buying date of the same synthetic share in the same DTCC name. So, in the end, the only difference in the worst case scenario would be that it allows hedgies to kick the can. But, obviously they can already do this anyway. So what would be the difference? Nothing. "BuT iT givEs ThEm LiQuIdItY!". Market makers can manufacture liquidity, that's what they do. So, even IF this selling and re-buying hypothetically allows them to kick the can and even IF they couldn't before, DRS has a much greater benefit because it permanently ends can-kicking by starting MOASS! Please don't trust your tendies to a broker that won't DRS!!

This post is not FUD. It is meant to be purely motivational and encouraging. I think if and when GameStop releases the CS numbers as of January 29 in their March release, we will be lucky to be at 16M. Don't wait for that to get off your butt and DRS your max! I don't trust any broker now. I certainly won't trust them not to screw us over during MOASS and/or when they're facing insolvency. Why trust a broker with your millions?!? I don't say this to scare anyone, I say this because I want you to get your tendies and change the system.

Please don't give the hedgies "one more day" !! Please don't be a bystander. EVERY share matters. Everyone knows the system and the world needs to be changed. BE THE CHANGE!! Ignite the rocket!

■■■■■■■■ ■■■■■■

For newer apes, please check out computershared.net by u/jonpro03 and all apes check out newer posts by u/fleshfarm-leftover for more CS data perspectives.

TLDR: DRS your max! Spread the word.
#LOCK THE FLOAT!!!
