I'll admit, I'm a skeptic when it comes to NFTs, even the GME marketplace. If it makes money, great, but I think a lot of the use cases for them are people trying to find problems that can be solved with them rather than solving an existing problem. But maybe I'm wrong! It's happened before.

BUT.

As the title says, how would it work with partial shares? Can you have a fractional NFT? Can you get half of an NFT for half of a share? Equal numbers of NFTs and Shares would be great, easy, but that's not how the holdings work. So what then?

1 NFT per person wouldn't be useful, since it's not a question of how many people hold shares, but how many share in total are being held.

What about rounding? Up or down? You only get 1 NFT for each full share held? Or you get 1 NFT for even a partial share? That seems like a great way for the bad guys to hide their numbers in the difference.

Or maybe instead of 1 NFT per share, it's 10, or 50, or 100? That way, it's easier to portion out for partial shares, but still might run into problems if it's not a perfect fraction.

Or maybe I'm misunderstanding it, and you can actually have fractional NFTs, or shared NFTs between multiple holders, and someone could simply sell or buy shares of an NFT?

Or, there's some other way to handle it that I've entirely overlooked that you folks can think of.
