I've been building [Quiver Quantitative](https://www.quiverquant.com/) over the past couple years, a free alternative data platform, and wanted to start sharing some of the data I've been providing in the form of daily posts.

If you'd like to take a deeper dive, you can click the links in the section headings to see live data updates for the respective datasets, or navigate through the rest of [my investment data site](https://www.quiverquant.com/) to see other datasets.

These updates include just a handful of brief insights from a few of my datasets to keep things as simple as possible. I know people get tired of reading big walls of text, so I'll try to keep these updates as visual as possible.

I hope you enjoy, and please let me know if you have any feedback.

[Off-Exchange Activity**]**(https://www.quiverquant.com/offexchange/GME)

Yesterday, 609.58 thousand shares of GME were traded off-exchange and 342.72 thousand of those shares were sold short, giving GME a DPI of approximately 0.56.

There have been daily posts on this data, but they're typically missing the historical context showing how large the recent numbers are in relation to in years prior. Here's a visualization:
